

Paperless Parking Validations

Mobile solution for visitor parking at UW–Madison

FlexVal is a mobile parking validation solution to improve the parking experience for UW–Madison departments and their visitors.

With FlexVal, guests simply get their parking ticket scanned with any device able to scan QR codes, such as a tablet or smartphone. Paper “chaser tickets” are no longer needed to validate visitor parking sessions.

Flexval calculates and applies a discount to the customer’s parking ticket and invoices your department’s TS number.

Where Flexval works

- **Information desks and kiosks**

Easily issue validations with any device able to scan QR codes or by manual ticket entry. FlexVal can also be deployed at secure self-service kiosks.

- **In the field**

Because FlexVal can be used with a smartphone, it is a great solution for those working outdoors.

- **Special events**

Staff can scan tickets with a smartphone or device equipped to scan QR codes to prepay event parking, reducing wait times.

Good for visitors

- Parking validation process is quick and easy.
- No more keeping track of validation tickets.
- Self-service options are available.

Good for your department

- No need to place or pick up validation orders.
- No leftover expired validations. Save paper!
- More control over the validation process.
